

COMPLIANCE REPORT

ENERGY EFFICIENCY

Pursuant to Part 3.12 of the National Construction Code

A House Energy Rating Report was provided as part of the Building Permit Process for the construction of a House.

The report provided a table of features of the house design and construction which were identified by the software as critical to the achievement of the rating. If there has been any changes to these features proposed or during construction, the house should be re-rated to ensure that the required star rating has been maintained.

The builder and owner must check that these requirements have been carried out and certify that they have been completed in accordance with that energy report. If the house has not been constructed to the standards listed in this report, further ratings must be provided to show that the required rating has been achieved.

CERTIFICATION

I/We certify that the energy efficiency requirements of Report No for the construction of a house at:

(Property Address).....
.....

has been completed so as to comply with the above mentioned report.
